

MOBILE TRAINING TEAM BULLETIN

Tip of the Month

When downgrading synopsis files through CENTRIXS, make the .xml file a .txt file and add an UNCLASSIFIED banner in the first line of the document. Once downgraded, remove the banner and resave as an .xml

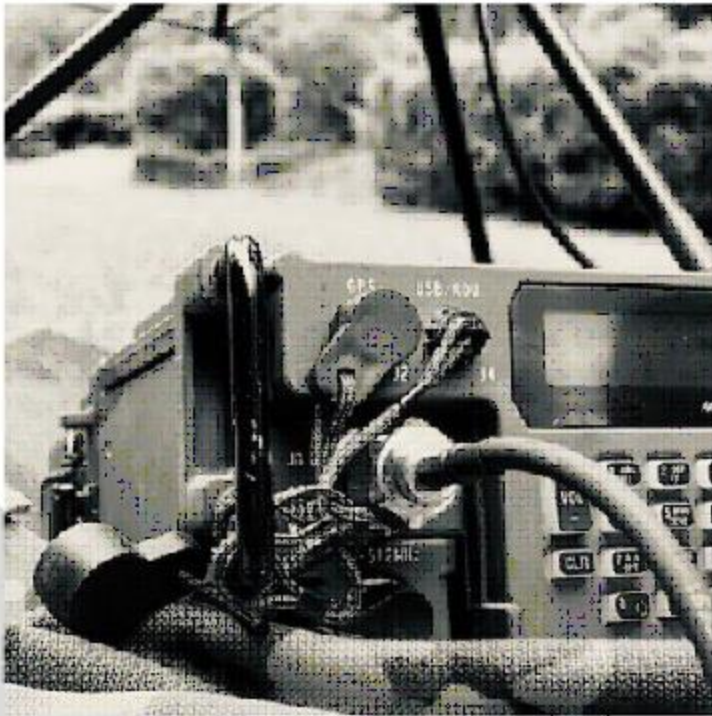

Exercise Support

The STF Mobile Training Team understands the many complications surrounding successful planning and execution of training events and field exercises. Like you, we want everything to operate smoothly before, during, and after an event. That's why we are here to support all your communications needs. Not only can STF support your MUOS planning, provisioning, and operating needs, but everything in between. From HF, UHF/VHF, tactical C4I planning, crossbanding, and application integration, STF's highly skilled team is ready to support your tactical communications needs.

- Embedded daily operational support
- Help resolve issues rapidly through vast network of personnel
- Assist with execution of field support requirements

Technical Support

MUOS Initial Provisioning Requests (IPRS)

United States Army Space and Missile Defense Command (SMDC) has recently provided guidance to the services regarding the provisioning of new MUOS Terminal Profiles. In order for a unit or organization to receive approval for new Terminal Profiles, their service component transition managers are required to submit a MUOS Terminal Management Plan, outlining the quantity of MUOS capable terminals that have been assigned to the requesting units. This ensures that when a unit initiates a new request in the Joint Satellite Communications (SATCOM) Management and Planning System (JSMPS),

the Operational Provisioning Authority (OPA) is provisioning the correct amount of MUOS resources with little room for error (i.e., a unit has 10 capable terminals, but requests 100 terminal profiles). If you need assistance during this process or have any questions, please reach out.
